

Bring Your Plots to Cloud Nine with Plotnine

September 30th, 2022

R AND Python

- End of the day we're all on the same team with a common mission
- Special opportunity to collab with folks from both worlds
- Plotnine is a great data visualization crossover – R ggplot for Python!

ggplot is a little bit like cake...

We *always* start by setting up the foundation with **ggplot()**

We specify our ingredients (data variables) with an **aes mapping**

We can create *layers* to our plot with **geoms**

We can style our cake ggplot with **themes**. We have out-of-the-box options, or we can go totally custom!
